PROACTIVE Real-Time Wireless Expense Management

Managing the costs and security risks associated with the deployment of mobile technologies is an increasing challenge for organizations as a result of the rapid proliferation of connected devices.

REDUCE WIRELESS EXPENSES BY 20% – 80%

Get an innovative and powerful Real-Time Wireless Expense Management SaaS solution that allows small, medium and large businesses to dramatically reduce their telecom expenses.

Our solution proactively monitors, reports and analyzes data, voice, SMS and roaming consumption on your fleet of mobile devices. In addition to predicting and preventing upcoming telecom costs, we gain real-time visibility and control over your mobile work force. We manage it for you!

WIRELESS EXPENSE MANAGEMENT

VS.

REAL-TIME WIRELESS EXPENSE MANAGEMENT

Wireless Expense Management systems analyze past bills from the carriers to determine if there were billing mistakes and search for ways to optimize telecommunication costs.

The issue with WEM systems is that they analyze past expenses and do not forewarn of current or future potential expenses. A Real-Time WEM is able to analyze the carrier network usage in real-time and use predictive methods to help prevent costly, unexpected overages from occurring. If it is on the bill, it is too late!

Real-Time WEM is a critical cost containment capability that enhances both mobile Telecom Expense Management (TEM) and Mobile Device Management (MDM) solutions. For TEM solutions, Real-Time WEM shifts the expense management focus from post bill receipt to the actual point of consumption, reducing or proactively preventing the cost impacts of unnecessary overages.

For MDM solutions, Real-Time WEM provides a rapidly deployed, easily configurable cost management capability that goes beyond traditional device security and control, enabling a more effective and complete solution. Based on its immediate and predictive cost containment nature, Real-Time WEM is an essential component in the elimination of “bill shock” or the unexpected receipt of large mobile services bills by individuals and organizations of all sizes.

FEATURES

- Pro-active alerting and reporting on costly events such as plan overages and international roaming
- Automatic carrier plan optimization tools
- Device location reporting and audit trails
- Policy enforcement on the device (ex: cut data off when user is roaming)
- Abuse prevention through end user messaging and audit trails
- Anomalous event alerting (ex: large single data transfer alert)

BENEFITS

- Eliminate surprise carrier bills
- Reduce and optimize Telecom costs
- Track your mobile devices on a map
- Increase security through anomalous event alerts and enforcing device policies

WE SUPPORT THE FOLLOWING DEVICES

- Blackberry®
- PlayBook
- iPhone
- iPad
- Android
- Windows Mobile
- WinCE Devices
- Computers, Laptops and Netbooks running Windows based operating systems
- Rugged Modem Devices from companies such as Sixnet and Sierra Wireless
