

inCONTROL Video

*Reliable Broadcast Quality Video
that is Easy to Use*

**Customer-Controlled
Intelligent Networks**

inCONTROL Video provides a premium grade of IP bandwidth specifically engineered to deliver consistent performance of real-time video with true TV quality at all times and under all network conditions. Now you can save 30% or more versus traditional ISDN video, while enjoying the advantages of simple call set-ups and stable network connections. Best of all, when your business is ready, you can easily migrate your data and voice to the same network connection for significant cost savings and simplified network management.

inCONTROL Video Delivery Options:

Consistent Quality: Both options offer the same high quality video backed by industry-leading Service Level Agreements (SLA's), and the added capability of migrating to a converged solution over time.

Video SLA Insures Quality and Reliability:

- 100% video packet delivery
- Guaranteed in-sequence
- 5ms maximum latency variation ("jitter")
- Sub 1 second fast failover for network recovery
