

NATIONWIDE MPLS

**SINGLE SOURCE. BEST NETWORKS.
LOW FLAT RATES**

COST-EFFECTIVE, SCALABLE, MULTI-LOCATION NETWORKS

As businesses grow, network requirements become more complex. MPLS has gained a tremendous amount of traction in the marketplace due to the following key benefits:

Benefits of MPLS

- ➔ Cost effectiveness
- ➔ Scalability
- ➔ Flexibility
- ➔ Reliability
- ➔ Security
- ➔ Efficiency

MPLS addresses the needs of multi-location networks by offering cost-effective connectivity over state-of-the-art private IP networks. Traffic is routed within an IP “cloud” to enable connectivity from any site on the network to any other site on the network.

Augmenting the network with additional locations is simple on an MPLS network. As a business grows, the network can scale appropriately, without a lot of time, effort or cost.

CONTROL COST, EVEN OUTSIDE OF TIER 1 MARKETS

Get competitively priced access on nationwide MPLS networks with Nitel. Experience secure, reliable network connectivity anywhere in the country.

With Nitel OneRate™ MPLS, locations in tier 2, tier 3 and rural markets receive the same low price as in a metro area. We eliminate distance calculations from our pricing scheme so clients benefit from lower pricing, especially outside of major cities.

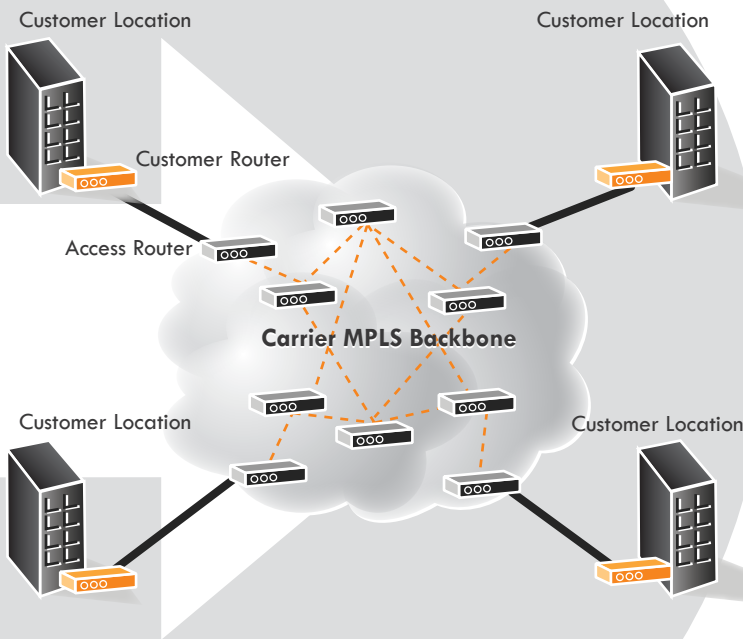

Connect Across LEC Regions

Don't let the locations of branch offices, data centers, sales offices or corporate headquarters stand in the way of taking advantage of all MPLS has to offer. MPLS services from Nitel offer nationwide connectivity and cost-effective local access, regardless of who the incumbent local carrier is.

PRIORITIZE TRAFFIC FOR OPTIMUM RESULTS

MPLS clients ensure the efficiency of their network by assigning class of service (CoS) to their different types of traffic. Using this capability, best-effort traffic (e-mail) and delay-sensitive applications (voice and video) can be carried across the same network as ordinary data traffic, with each type of application being given the appropriate handling and priority via MPLS. This gives customers a cost-effective approach to manage bandwidth in order to achieve specific performance levels.

MPLS solutions are provisioned across Tier 1 carriers' networks, using MPLS to provide routing and manage quality of service (QoS). Customers don't need to purchase additional Virtual Private Network (VPN) equipment for their own sites.

A MORE FLEXIBLE NETWORK OPTION

Save on network costs by running multiple protocols over an MPLS network. Inherent in MPLS is the ability to efficiently transmit voice, video, data or Internet traffic over a single connection.

MPLS also supports IP VPN for added security within the network.

MPLS MEANS GUARANTEED PERFORMANCE

Gain peace of mind for your business or your client's business with Nitel's performance guarantees. Nitel's industry leading SLAs ensure the reliability and continuity of service with financial repercussions that protect you or your client if the network does not live up to performance standards

EXPERIENCE READY TO SERVE YOU

Headquartered in Chicago with offices in Atlanta, Ga., Madison, Wis., and Reno, Nev., Nitel has built a reputation for serving our clients with customized solutions since its founding in 1997. Self-funded, organically grown and profitable, Nitel is a stable, trusted partner to telecom agents, wholesale and enterprise business customers nationwide. Information about Nitel is available via its web site at www.nitelusa.com.
