## MPLS VPN links remote locations with secure converged connections.

Give employees and partners in remote locations the same fast, reliable, secure, and cost-effective access to corporate information and enterprise applications as your employees at headquarters with MPLS VPN service.

Superior Performance

With fully meshed, direct site-to-site paths, rather than a hub-and-spoke network topology, MPLS VPN service reduces the time and distance of data travel, resulting in faster communication and increased productivity for your business.

Quality of Service

Direct MPLS paths also enable us to provide Quality of Service (QoS), ensuring that business-critical applications like Voice over IP (VoIP), enterprise applications, and credit card transactions are prioritized for the highest level of quality.

Maximum Security

With MPLS VPN, your sites are connected via a private network, so they are less susceptible to Internet-based attacks. We provide your business with a private MPLS routing domain, and we maintain secure Internet gateways to block viruses, spam, and hackers.

High Availability

With MPLS VPN, your sites leverage MegaPath's fault-tolerant network, promoting uptime and performance. Additionally, MegaPath offers automated failover solutions to ensure you have access to your network in the rare instance of primary outages.

Bandwidth Choice

We offer a full range of business-class DSL, T1, DS3, Business Ethernet, and Wireless broadband solutions. We can work with you to provide every site with the right bandwidth at the right price, so you don't have to manage multiple access vendors. We can also extend the reach of your VPN to partners or remote workers using their existing Internet access.

Benefits

Fully meshed mpls vpn
Maximum performance
Quality of service
Pci compliant
24 / 7 / 365 Support

Comparison to ISPEC VPN and Frame Relay Solutions

MPLS VPN service offers a host of advantages over do-it-yourself IPsec VPN and traditional frame relay alternatives.
