

Wireless Broadband Service delivers high-speed broadband connectivity when and where you need it.

Product Summary

Secure Access at Broadband Speeds

MegaPath Wireless Broadband provides secure access to your network and the Internet at broadband speeds. Available to businesses that have MegaPath's Site-to-Site MPLS VPN service, it supplies sufficient bandwidth to support your business application needs and provide a stable and reliable connection.

MegaPath Wireless Broadband is a good fit:

- For remote locations that aren't able to connect via DSL or cable
- As a quick start solution while you're waiting for your primary broadband connection to be installed or for a temporary location
- As a fully-redundant backup access service for your existing T1, DSL, or cable service

MegaPath deploys all the necessary equipment and sets up the service, then manages and monitors the network to ensure it's working for you. MegaPath Wireless Broadband access uses IPsec encryption to provide PCI-compliant security.

Connectivity

MegaPath Wireless Broadband Service allows you to:

- Deliver 100% coverage to all your remote locations
- Open stores and branch offices on time, while you wait for broadband or T1 connectivity
- Employ a fully-redundant backup method for access to the corporate network and the Internet
- Enjoy sufficient bandwidth to support your business-critical applications
- Rely on fully managed and 24x7 proactively monitored network access
- Count on a single provider for all of your network and security needs
- Ensure that your network is PCI compliant

Benefits

Single Provider for All Locations

Fully Monitored and Managed

24/7/365 Support

Access from Remote Locations

If your business has branch offices, retail stores or restaurants, or any other type of locations that do not have access to DSL or cable, MegaPath Wireless Broadband provides always-on, high speed connectivity to the Internet and your corporate VPN.

Quick Connectivity

If you've ordered broadband or T1 connectivity, there's no need to wait until it's connected to provide access to your users. Use MegaPath Wireless Broadband as a temporary access method while you wait for your circuit to be delivered. It takes a fraction of the time to configure and install than traditional broadband connections. And, it can be used at one-time events, like conferences or festivals, where getting a cable or DSL connection for a day or two doesn't make sense.

Redundant Access

If you have DSL, cable, or T1 access today, Wireless Broadband is the perfect backup should you experience disruptions in your existing service. Wireless Broadband doesn't use the same last-mile local loop facilities as terrestrial broadband access services, so it provides complete redundancy. And, unlike dial backup, Wireless Broadband gives your employees access to the Internet and your corporate VPN at broadband speeds.

Advantages

End-to-End Nationwide Infrastructure

Our privately managed MPLS network provides exceptional performance, total redundancy, and the flexibility to deliver true voice Quality of Service.

Complete Service Portfolio
