

VoIP Applications

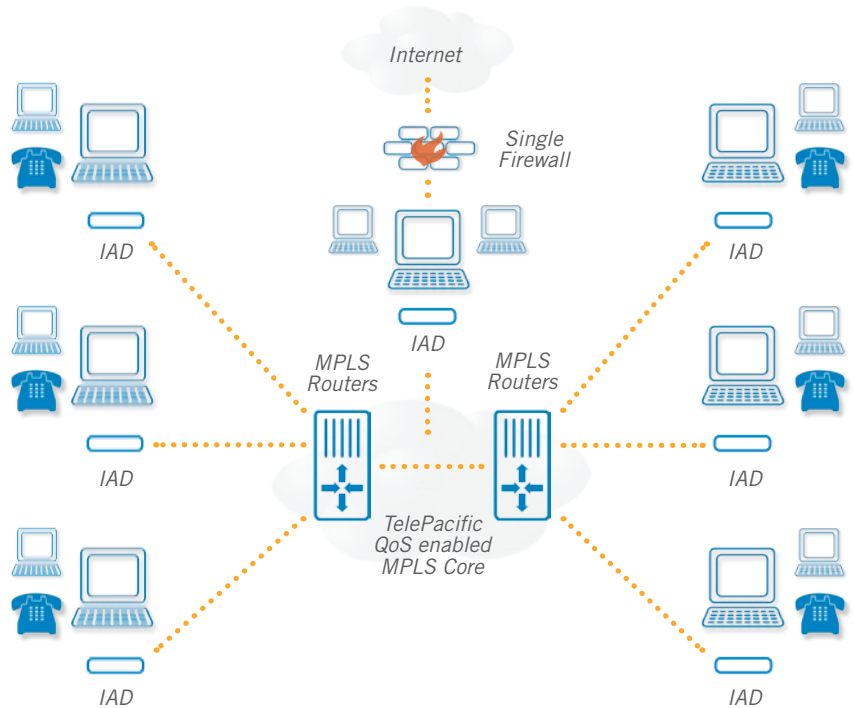

You've heard the buzz about VoIP, and TelePacific has the answer. Voice over Internet Protocol (VoIP) allows transmission of voice calls utilizing the same standard used for data transactions; it enables the convergence of traditional data applications with voice to make better use of telecommunications facilities and can provide enhanced features and functionality, like unified messaging and dynamic bandwidth allocation. Whether your company is looking to upgrade its phone systems with the latest in VoIP technology, or just wants to access VoIP like applications, TelePacific has the right services to meet your needs.

VoIP Services

- ① Net MPLS
- Private IP
- VPN Services

MPLS-IP Service allows multi-location businesses the ability to utilize TelePacific's backbone for VoIP services in conjunction with IP-based equipment.

The ability to converge voice and data traffic over the same facilities improves bandwidth utilization and facilitates better management of your voice and data communications.

Quality of Service (QoS)

QoS is the perfect complement to your VoIP services. Providing priority to your voice traffic, ensures that your conversations achieve the voice quality that your business demands.

OnePac

Delivering both voice and data over a high capacity T-1, this dynamically allocated service uses your idle phone channels to automatically boost your data bandwidth. Available in line, trunk and PRI flavors, OnePac is the solution for your business no matter the application. A great complement to today's VoIP phones or your existing equipment.

We make sure you have enough voice lines for your calling patterns. And when a line isn't in use, you'll benefit from increased bandwidth.

OnePac Office

OnePac Office is specifically designed for business customers with 5 to 12 business lines. Now smaller businesses can take advantage of the latest in dynamic VoIP applications.

Usage Options

Calling Plans

Whether utilizing TelePacific's VoIP services or traditional services, there are multiple usage plans to suit the needs of your business from unlimited inter-office dialing plans with station-to-station dialing to pre-paid plans that may offer you the unlimited domestic long-distance that you need. Certain restrictions may apply.

Applications to Complement VoIP or Traditional Phone Services

Free Calling Between Locations

With Station to Station Dialing, all calls between your offices on TelePacific's network are free. Calls between your locations never accrue usage while your employees take advantage of abbreviated dialing.

Find-Me, Follow-Me Voicemail

TelePacific's Call Central services enable inbound callers to follow you to any number you designate, so you won't miss important calls. Plus you can access your voicemail—as an attached sound file—anywhere you can access your email.

Fax-to-Email

With Fax Central you can access your faxes anywhere you access your email. There are no busy signals when people try to send you a fax, and confidential faxes go straight to your email box.
